

Glow Plug Controllers

Engineered in Germany

Glow Plug Controller for various BMW applications

Benefit from the development of our glow plug controllers. A technical modification of the OE part enables us to react to the high error rates of these products and provides you with the latest technology with a market coverage of more than 90%.

The increased error rate in the field comes from the internal mechanical construction. The connection of the connector area with the printed circuit board is subject to severe stress. This often leads to a malfunction of individual glow plugs or a complete failure of the glow plug controller.

Astemo has reacted to this problem and improved the internal design of the glow plug controller completely.

By utilizing heavy-duty and specially injected contacts which are then soldered we ensure the highest quality product.

A replacement of these glow plug controllers can be necessary in winter as well as in summer since they are not highly exposed to seasonal fluctuations. That is why these special types of glow plug controllers are highly demanded products.

**Avoid unnecessary product complaints -
choose the technology of Astemo which is unique in the IAM.**
